

PATCHET · Agent-Aware Identity for Mission Systems

OV-1 · OPERATIONAL CONCEPT GRAPHIC

Mission: Secure agent-to-agent operations across federated mission systems

DOCUMENTED ATTACK VECTORS — BLOCKED AT THE IDP LAYER

IDENTITY SUBSTITUTION

Real-world pattern: SolarWinds (Dec 2020)
Malicious code with valid identity → trusted across 18,000+ downstream systems.

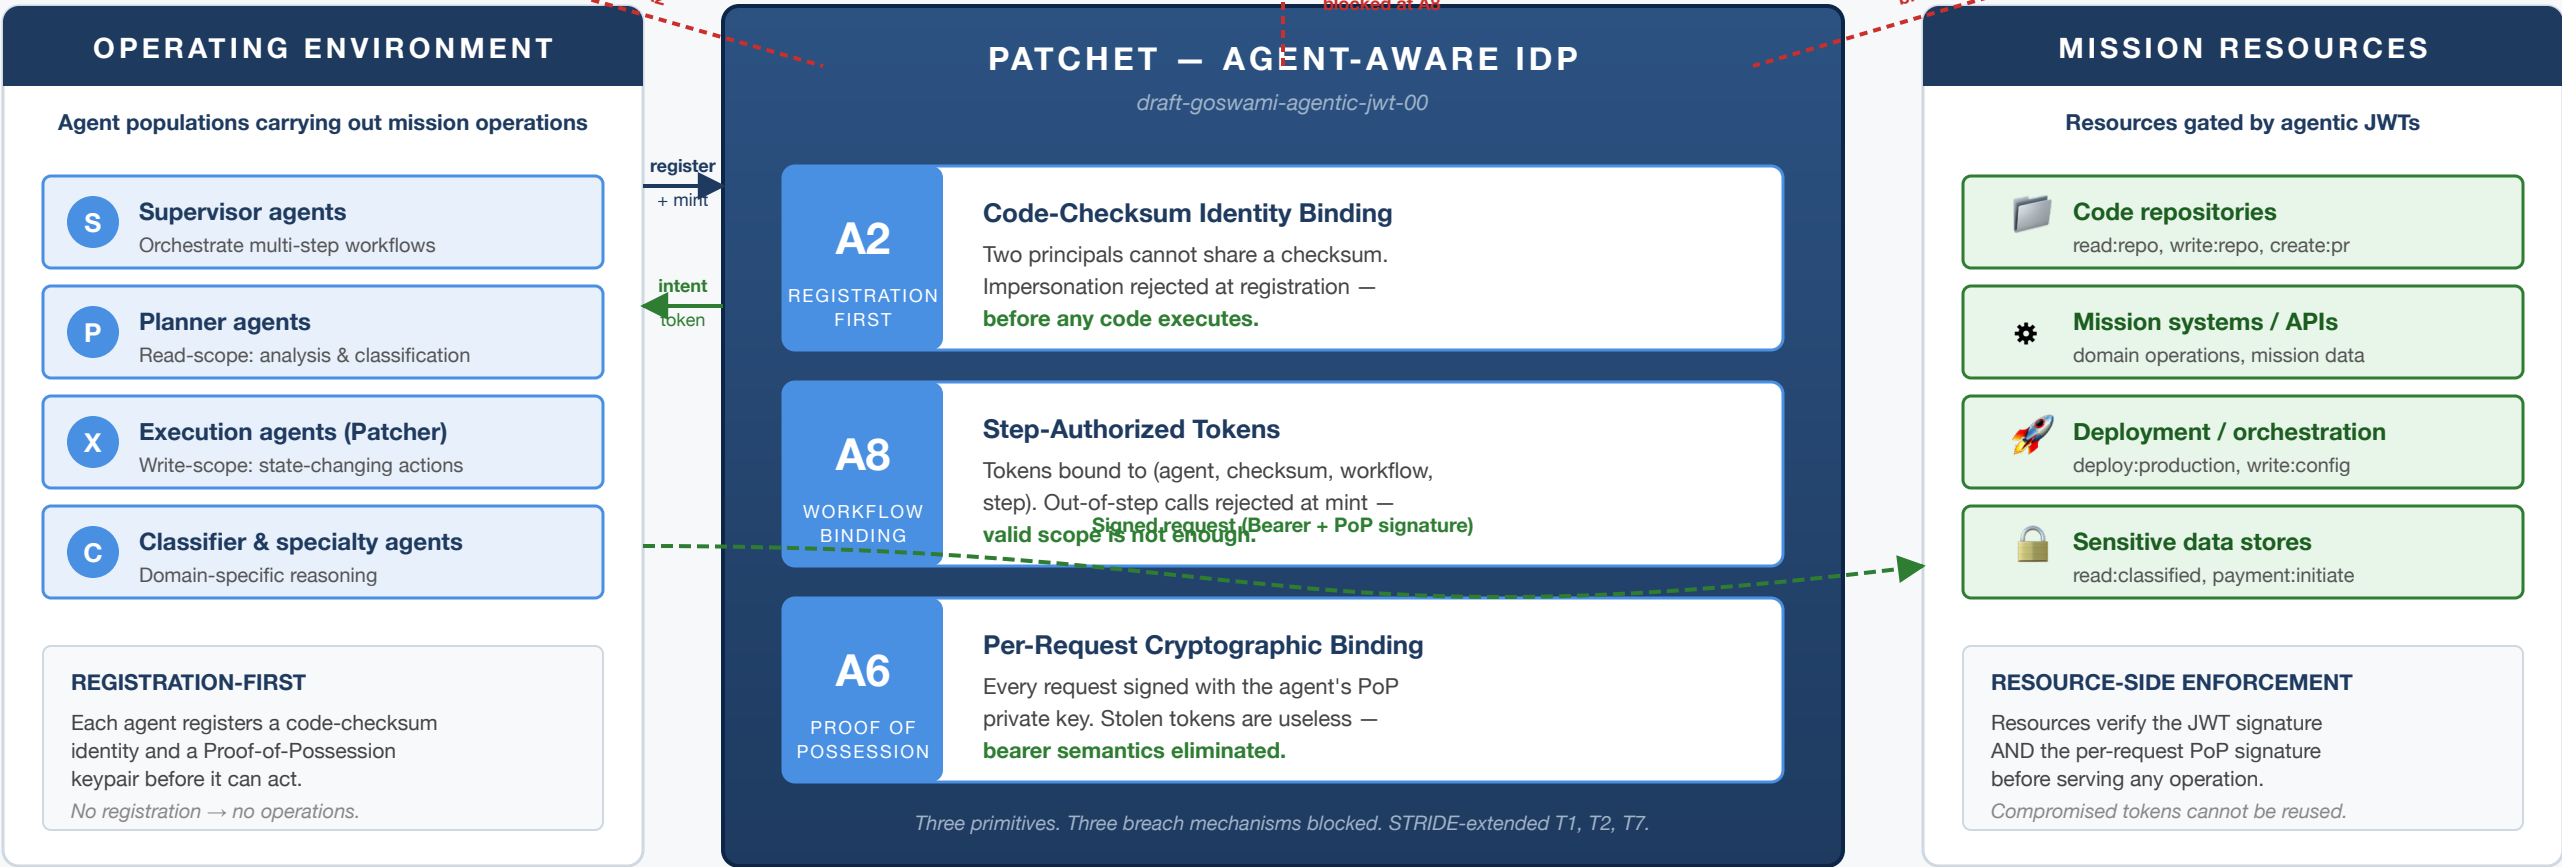

PRIVILEGE ESCALATION

Real-world pattern: Uber (Sep 2022)
Valid credentials, wrong workflow step → unauthorized high-privilege operation.

TOKEN REPLAY

Real-world pattern: Okta (Oct 2023)
Stolen bearer token replayed by attacker → accepted by all RFC-6750 endpoints.

OPERATIONAL SCENARIOS & EVIDENCE

REPRESENTATIVE SCENARIOS

- Coalition agentic SOC operations across security domains
- Autonomous mission-system patching by agent fleets
- Cross-domain agent collaboration with provable identity
- Agentic incident-response with delegated, scoped authority

LIVE REFERENCE IMPLEMENTATION
